

Covercool (Cuddle Blanket)

LIGHT AND PORTABLE, WITH THE FLEXIBILITY TO COOL A BODY ANYWHERE

CoverCool™ (Cuddle Blanket) – Giving *grieving families the gift of time.*

CoverCool™ revolutionises cooling allowing grieving families an opportunity to spend time with their loved ones without having to cool a whole room.

The portable CoverCool™ cooling system can be used to turn any bed into a refrigerated bed and allows families to cool a deceased child or adult at home, thereby preserving their appearance, condition and dignity.

CoverCool™ consists of a small cooling unit which circulates fluid through a cooling pad, which can be simply placed on top of the deceased. The Covercool Unit is portable, light, flexible and utilises thermoelectric cooling process rather than standard refrigeration.

The unit is set up in seconds, cooling the deceased directly and this is only switched on when required.
